Overwatch is
adaptable

Overwatch® is adaptable to industries with a need for real-time monitoring of critical variables, reporting, and automated solutions in:

- ☑ **Retail**
- ☑ **Renewable Energies**
- ☑ **Manufacturing Industry**
- ☑ **Oil and Gas**
- ☑ **Supply Chain Solutions**

Executive Summary

Imagine if you could have real-time, precise diagnostics of all operations simultaneously, and also have the ability to make the right decisions to automatically and instantly correct any incidents.
Too good to be true, right?
Well, the magic does exist, even if you don't know how the trick is done.

Overwatch® will become your new right-hand partner.

75%

REDUCTION IN INCIDENTS,
rigtht after installation.

The poor experiences your customers have at point of sale translate into endless losses and problems. Any investment made in communication and marketing can vanish in mere seconds if you don't avoid:

1. Payment delays
2. Pricing errors
3. Flawed implementation of promotional policies

Manual identification processes for these types of conflicts are extremely costly, do not address the underlying problem, and fail to prevent future incidents. If you continue to handle them manually, you will always be one step behind the problem.

Put an
End
to bad decisions

Stay Sharp

Spend your time on projects,
not on problems.

¿

What can Overwatch do for you while you dedicate time to your projects??

Real-time monitoring of the health of your point of sale systems, instant adaptability to demands, proactive alerts, and automatic error correction.

Overwatch also provides tangible added value: significant cost savings in operations.

The high rate of incident reduction compared to business as usual is over 75%, and this percentage is achieved immediately upon installation, meaning it is instant. As it gathers information, Overwatch has the ability to self-im-prove progressively, fixing errors and even predicting ano-malies in future operations.

Benefits

Put your Data to Work

Estimated 12-dollar return for every dollar invested in Overwatch, considering the **significant reduction in Touchpoint*** downtime.
Moreover, it **enhances security in installed environments,** maximizes the performance of installed resources, and ensures sales operations while **reducing costs from** cashier reallocation. It **minimizes customer complaints**, re-billings, and reprocessing that drain energy and constitute non-value-added activities.
Features

01

Multiplatform Assurance

Overwatch can work on Cloud or OnPremise, it is scalable, non-intrusive, and multiplatform. It provides an API to access the collected content.

02

Retail-oriented

Overwatch provides real-time and historical information instantly. Hot editing of business rules to adapt to operational demands.

03

Rules Engine

Allows for self-correction of errors or proactive alerts about them.

04

Mobile Ready

Available in native iOS and Android apps.

05

Distributed Processing

Capable of processing over 1000 transactions per second.

06

Integrated Health Dashboard

Measures system health based on errors in hardware, software, component versions, transactions, promotions, and prices.

07

Alerts

Intelligent notifications to key users through various channels (email, alerts, push notifications, mobile).

From Retail to other industries

The solution is adaptable to other industries that require real-time monitoring tools for critical variables, reporting, and automatic resolution. It is suitable for sectors such as renewable energy, manufacturing, and oil and gas, especially for integrating supply chain solutions.

Turing Corp is highly specialized in the needs and standards of the retail, oil and gas, renewable energy, mining, manufacturing, and services sectors. Turing Corp is composed of IT development experts who enhance market or industry results based on validated evidence.

Turing Corp analyzes problems from a business perspective and develops proposals that focus on company value, sustainability as a solution, and fast and agile implementation.

Our Value Proposition:

Boost Yourself

Overwatch®> Increase your productivity

Flexibility is the premise of Turing Corp.

You will have the option to choose from different alternatives for medium and long-term engagement based on "win-win" schemes, licensing the products under various payment models.

+

Enjoy 100% complimentary access to periodic upgrades of successive versions of Overwatch®, which may include customization of reports, variables, and monitoring dashboards.

Extra benefits>
- New version upgrades
- Report customization

Glossary

Touchpoints

"Touchpoint" is a concept used to represent the various points of interaction between a user or consumer and a company in the digital realm. In the Retail context, it could refer to any critical device for operations such as POS systems, scales, sensors, servers, etc.
